Experience

FoodHost, Oct 2022 – Present
Full-Stack Developer   **heyfoodhost.us**
- Working on a cross-platform web and mobile application using Flutter, which allows customers to conveniently order and reserve food while assisting restaurants in managing deliveries, reservations, and overall operations.
- Used Bloc and Riverpod management for easily scalable and maintainable code.
- Third party api integration like payment gateway configuration through stripe, google api and pusher for notification.
- Push notifications for new orders, reservations, and important updates.

Berbera Market PLC, Feb – Aug 2022
berberamarket.com
Mobile App Developer
- Implemented a new Berbera app feature named "Auction," resembling a game-like lottery, allowing customers to earn discounts of up to 50% on all purchases. This initiative significantly boosted customer engagement by 13%. Additionally, I successfully formulated and implemented related policies to ensure the seamless operation of the feature.
- Made code modularization for future code maintenance and scalability.

Projects

Fan 11
- A fantasy manager game where users assemble a squad of real-life players earning points based on their actual match performances. **github.com/bmuna/fan11-mobile**

Mezgeb e-Store
- is an e-commerce cross-platform mobile application. **github.com/bmuna/mezgeb-eStore**

Husslas Squad
- is a web app offering strategies for achieving financial freedom. **thehusslasquad.com**

Employee Management System
- for a food delivery company. **github.com/bmuna/Employee-Management-System**

Education
